Data used in this publication are as at end-2002 unless otherwise indicated.

Conventions used in the statistical tables:

nav: data not available nap: not applicable

neg: negligible (very small figures)

0: exactly zero or none

Country tables (1997–2002)

Figures are presented in the respective national currency.

Comparative tables (1997-2002), unless otherwise indicated

Figures have been converted into euro for all countries using the exchange rate shown in Table 1 of the respective country tables.

Introduction

Central banks not only face the task of steering the monetary conditions in the economy; they also have a direct interest in the prudent design and operation of the payment and securities clearing and settlement systems processing their currency. Payment systems play a pivotal role in a modern economy, as most economic activity relies on them. The smooth functioning of these systems is a crucial aspect of a sound currency and is essential to the conduct of monetary policy. These systems also have a significant bearing on the functioning of financial markets, since reliable and efficient payment and settlement systems are crucial to the maintenance of banking and financial stability.

The importance of payment and securities settlement systems in modern economies has grown considerably over the past decades. Especially within the European Union and in particular within the euro area, the introduction of the single currency has fostered the integration of these systems. It is therefore that central banks comprehensive information available to them in their endeavours to promote the soundness and efficiency of payment and securities clearing and settlement systems. In this context, in August 2002 the ECB issued the second edition of the publication entitled "Payment and securities settlement systems in accession countries", also known as the Blue Book.

The aim of the accession country Blue Book is to provide a comprehensive description of the main payment and securities settlement systems operating in the 12 accession countries. The range of country-specific schemes covered is not necessarily exhaustive and the selection is not intended to indicate their relative importance. While the descriptive part is updated once every few years, the statistical data are updated every year. This "Blue Book

Addendum" provides an update of the country data and comparative tables, including figures for 2002.

The tables reflect the increasing level of integration and convergence achieved in payment and securities clearing and settlement systems in the accession countries, while pointing to the remaining differences in terms of structure and variety. They also focus on the use of various payment instruments. The methodology used for collecting and calculating the statistical data is explained in the annex.

This publication has been produced in collaboration with the central banks of the accession countries.

¹ Bulgaria, Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Romania, Slovakia and Slovenia. Turkey is also an official candidate for EU membership, but negotiations for its accession have not yet started. Thus, it is not covered in this publication.

A card which has several functions is counted in each relevant column (e.g. a eurocheque card which can be used to
withdraw cash, to make payments and to guarantee cheques is counted under each of these three items). For this reason,
the figures should not be added together.

²⁾ Retailer cards in Poland are usually credit cards or charge card.

Some systems do not make explicit distinction between large-value and retail transactions and may be used to settle interbank transfers relating to a variety of underlying transactions. Some systems may also accept payment orders for a number of value days.

Settlement finality (local time): for net settlement systems

Memo item: standard money market hours (local time): money market hours indicated refer to the period in which domestic interbank transactions are normally carried out. They therefore do not relate to particular interbank funds transfer systems.

- $1) \ \ Designated-time\ gross\ settlement\ during\ the\ night.$
- 2) Customers' payment orders resulting from the implementation of the "Interbank Agreement on the Rules of Co-operation between Correspondent Banks".
- 3) Transactions are entered into the SNCC system and processed on technical accounts, transaction by transaction, throughout the day.

 At the end of the day, the balances of the technical accounts are forwarded to the central bank and the net positions are booked on the reserve accounts there. This constitutes the final settlement.
- 4) Money market transactions can be arranged throughout the day. There is an an evening money market from 16:00 to 17:00, when systems are closed for all transactions except money market transactions. Evening money market can be prolonged in the case of reasonable demand from a bank or banks.

Type: G = government securities; E = equities; B = bonds; C = CDs (certificates of deposit); O = other.

Owner/Manager: B = banks; CB = central bank; SE = stock exchange; O = other Settlement of cash leg: G = gross; N = net; RTGS = real-time gross settlement. DVP mechanism: DVP schemes as defined by the G10 Group:

DVP1: In model 1, transfer instructions for both securities and funds are settled on a trade-by-trade basis, with final transfer of securities from the seller to the buyer (delivery) occurring at the same time as final transfer of the funds from the buyer to the seller (payment).

DVP2: In model 2, securities transfer instructions are settled on a gross basis with final transfers of securities from the seller to the buyer (delivery) occurring throughout the processing cycle, but funds transfer instructions are settled on a net basis, with final transfer of funds from the buyer to the seller (payment) occurring at the end of the processing cycle.

DVP3: In model 3, transfer instructions for both securities and funds are settled on a net basis, with final transfer of both securities and funds occurring at the end of the processing cycle. Intraday finality; Y = yes; N = no.

Cash settlement agent: B = banks; $CB = central\ bank$; $SE = stock\ exchange$; O = other.

All banks licensed in the Czech Republic can be direct participants. Participants have to enter into an agreement with the central bank which
also contains rules and technical reguirements. Rules will be modified by the new Act on Payment Systems (in force from 1 January 2003).
 The owner/manager is the central bank.

- 1) Includes Estonian kroon and foreign currency demand deposits (excluding deposits of non-residents and central government).
- In January 2002, the Bank of Estonia changed the definition of monetary aggregates. The earlier time series were recalculated according to the new definitions.
- 3) M2=M1+time, savings and other deposits in Estonian krooni and foreign currency held by residents with credit institutions, loan and savings co-operatives and the Bank of Estonia.

¹⁾ Figures for ATMs and POS terminals have been separated since 2000.

Payment instructions handled by selected interbank funds transfer systems: volume of transactions

(thousands)

| | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 |
|-------------------------------------|----------|----------|-----------|-----------|-----------|-----------|
| Interbank Clearing System (ICS) | 49,697.0 | 63,940.2 | 102,787.8 | 125,775.4 | 139,573.2 | 154,481.7 |
| Customer-initiated credit transfers | 49,606.5 | 62,489.2 | 75,323.5 | 85,906.9 | 92,522.0 | 95,782.1 |
| Bank-to-bank transfers | 1.7 | 0.5 | 0.8 | 0.2 | 0.1 | 0.1 |
| Direct credits | 1.0 | 877.9 | 13,223.7 | 21,410.1 | 26,391.5 | 34,536.7 |
| Direct debits | neg | 479.0 | 14,132.6 | 17,964.4 | 19,960.5 | 21,718.9 |

²⁾ From 2000 - 02 almost half of the cards were linked to credit accounts, but there was no interest-free period.

³⁾ Number of POS accepting Amex and Diners are included in the data for 2002.

⁴⁾ From 2002 there are also charge cards bearing the MC and Visa logo.

⁵⁾ Data includes retailer, delayed debit and credit cards.

- 1) Estimated data.
- 2) Payments with debit and retailer cards within Hungary and abroad.
- 3) Payments with credit and charge cards within Hungary and abroad.
- 4) Includes items initiated by banks (figures in HUF billions): 12,681.5 in 1997, 19,002.5 in 1998, 30,155.6 in 1999, 43,804.6 in 2000, 90,386.5 in 2001, 90,385.1 in 2002.
- 5) By contrast with 2001 includes payments submitted eletronically (floppy disk/CDs).
- 6) In 1997 direct credit payments were carried out by means of bilateral data exchange between the creditor and debitor banks. Direct debits were introduced in the ICS at the end of 1997.
- 7) The increase in value between 2001 and 2002 is due to the boom in mortgage loans, which are repayed using direct debits. The average value of these repayments is 10-20 times larger than that of normal direct debits.

| required reserves | 370.6 | 389.9 | 386.7 | 372.4 | 422.6 | 457.5 |
| free reserves 1) | 19.4 | 477.9 | 57.9 | 248.2 | 160.9 | 133.7 |
| Transferable balances held at other banks <i>Memorandum item:</i> | neg | neg | neg | neg | neg | neg |
| Institutions' borrowing from central bank | neg | neg | neg | neg | neg | neg |

¹⁾ The high degree of liquidity in 1998 was influenced by the government programme of restituting deposits to citizens.

²⁾ Broad money consists of M1 and quasi-money (time and savings deposits and foreign currency deposits).

M1 consists of currency in circulation (banknotes and coins) and transferable deposits held in domestic currency.

¹⁾ With effect from end-March 2002 the NBP harmonised the definition of money and its counterparts with the standards binding upon the Member States of the European System of Central Banks (ESCB). Sectorisation principles of the economic units have also been adjusted. Thus, data for the previous year are recalculated and presented according to new methodology.

²⁾ Broad money supply (M3) consists of: M1 plus deposits with an agreed maturity of up to two years and deposits redeemable at notice of up three months, plus repurchase agreements, money market fund shares/units, money market paper and debt securities with a maturity of up to two years.

¹⁾ Since January 1995 the National Bank of Poland has issued new zlotys (10,000 old = 1 new). Old and new zlotys circulated in parallel for two years. In January 1997 old zlotys were withdrawn from circulation. They can be exchanged for new zlotys until 31 December 2010. As the line "in circulation outside credit institutions" also contains old zlotys, which have still not been exchanged for new zlotys, the total notes and coins issued is not equal to the sum of the last two lines.

- 1) All transactions on the single organised market (Ljubljana Stock Exchange) are cleared through KDD. The volumes of transactions handled by the trading platform and by the clearing house respectively are not equal, because each stock exchange transaction could lead to several separate instructions for the clearing house.
- 2) A breakdown by sub-items is not available. The Structure shown is consequently an approximation based on the breakdown under Trading platforms.
- 3) All transaction settled through KDD (organised and OTC market).

¹⁾ In January 2000 changes were made to the reporting methodology, resulting in a 2% increase in global SWIFT traffic. The new methodology was applied retroactively to 1999.

²⁾ Data include dematerialised securities only (nominal value).

METHODOLOGY FOR THE STATISTICAL DATA

ANNEX General

Exceptions Data in the tables conform to this methodology unless

otherwise indicated.

However, it should be noted that varying methods of collecting

data can also complicate cross-country comparisons.

Breaks in series These are indicated by a footnote.

Sources of data These are indicated where appropriate.

Definitions Definitions in the tables which are not given in this

methodology are based on the glossary included in "Payment and securities settlement systems in the European Union",

ECB, June 2001 (http://www.ecb.int).

Where necessary, footnotes to individual tables explain the country-specific definitions, e.g. of "banks". (It should be noted that, in general, the term "banks" should be broadly construed according to local regulations so as to include all relevant financial institutions, e.g. "credit institutions" in EU

countries.)

Intrabank items These are included as appropriate, except where indicated.

Foreign currency Foreign currencies are not included in the figures unless

otherwise indicated.

Total Totals are calculated on the basis of the items available.

Time period Each table indicates the period (e.g. year) or point of time (e.g.

end-year) to which the data apply. Where the data apply to a period, the data are the total for that period, unless otherwise

indicated (e.g. a daily average).

Estimated data Where data are broadly estimated and thus only indicative, this

is indicated in a footnote (except for population and GDP in Table 1 and data in Tables 12 and 13, where it is understood

that the data are estimated).

Seasonal adjustment Figures are not seasonally adjusted unless otherwise indicated.

"nav", "nap", "neg" and "0" Where data are not available, this is indicated by "nav". Where

data are not applicable, this is indicated by "nap". Where data are very small (relative to other relevant data in the table concerned), this is indicated by "neg". Where data mean absolutely zero or none, rather than being a small number

rounded to zero, this is indicated by "0".

Table 1: Basic statistical data ANNEX

Population Figures are averages for the year or at a point in the year as

indicated.

GDP Figures are nominal (not real).

GDP per capita This figure is the GDP figure divided by the population figure.

Exchange rate (domestic provided currency vis-à-vis EUR) end-of-year average

The exchange rate of the local currency against the euro is both as an end-of-year value and as an average for the year.

Table 2: Settlement media used by non-banks

Banknotes and coins Banknotes and coins represent the value of cash in circulation in the economy. This excludes the value of banknotes and

coins kept in vaults at central banks or at banks (see Table 4),

but includes the value held by non-residents.

Transferable deposits These are transferable deposits, which can be used to make

cashless payments using one of the instruments mentioned in Tables 9 and 10. They do not include deposits in foreign currencies unless these are included in M1. If they are not included in M1, they are included under the separate item

transferable deposits in foreign currencies.

Others Filled in only if the narrow money supply (M1) includes items

other than banknotes and coins and transferable deposits.

M1 Cash in circulation and transferable deposits held by non-

banks. This line has not been filled in by countries which no

longer calculate this aggregate.

Memorandum item:

Broad money supply Included in some cases. Footnotes to individual tables explain

the definition of broad money supply used and how it differs

from narrow money supply.

Outstanding value on The difference between the value of cash loaded onto

electronic

e-money schemes purses (a reloadable multi-purpose prepaid card which may be

used for small retail or other payments instead of banknotes and coins) or onto electronic wallets (a computer device used in some electronic money systems which can contain an IC card or in which IC cards can be inserted and which may perform

more functions than an IC card) and the value spent.

ANNEX Table 3:

Settlement media used by banks

Transferable balances held at central bank

Deposits held by banks at the central bank which can be used for payment purposes, regardless of the type of account (e.g. current account, reserve account, settlement account or clearing account).

of which:

required reserves

Funds that banks are required to hold at the central bank. If only only part of the required reserves can be used for payment purposes, that amount is indicated here.

free reserves

Funds held voluntarily at the central bank that can be used for payment purposes.

Transferable deposits at other banks

Deposits held at other banks in the country (not at the central bank) which can be used for payment purposes.

Others

Included only if assets other than balances held at central bank and transferable deposits at other banks are relevant. In some cases a breakdown is provided. In other cases a footnote indicates what is included in this item.

Memorandum item:

Institutions' borrowing from central bank

Institutions' borrowing (in the forms defined in a footnote by the respective country) from the central bank which can be used for payment purposes.

Table 4:

Banknotes and coins (end-of-year figures)

Total banknotes issued

Value of banknotes which are part of the central bank's liabilities. A breakdown by denomination is provided.

Total coins issued

The total value of coins is provided along with a breakdown by denomination.

Total banknotes and coins

is sued

Value of banknotes and coins excluding those kept in vaults at central banks or at treasury departments (but including those held at banks).

Banknotes and coins held by credit institutions

Banknotes and coins in the vaults of credit institutions and thus not in circulation.

Banknotes and coins in circulation outside credit institutions

Total banknotes and coins issued minus banknotes and coins held by credit institutions (identical to banknotes and coins in Table 2).

Table 5: Institutional framework (end-of-year figures)

Categories Categories of institutions are based on the individual countries'

own financial systems. Particular categories are explained in a

footnote, where necessary.

Columns 1 and 2 Number of points of entry into the cashless payment system.

Column 1: number of

institutions

Any institution which executes cashless payments is mentioned even if it does not hold deposits for customers (e.g. because the money transferred is given to the institution in cash by the customer, or debited from a sight account held at another

institution).

Column 2:

number of branches

All branches of an institution. As a rule, the head office of the institution is counted as a branch if it offers cashless payment

services.

Column 3:

number of accounts

Number of accounts on which cashless payments (see definitions in Tables 9 and 10) can be made.

The only accounts mentioned here are those which:

are held by deposit-taking institutions for non-deposit-taking institutions;

can be debited directly using one of the instruments

mentioned in Tables 9 and 10.

Column 4: number of internet-linked accounts

Number of accounts, relating to internet services (credit transfers and the payment of bills, etc. carried out via

the internet).

Column 5: value of accounts

Aggregate amount of deposits held on accounts mentioned in Columns 3 and 4. As a rule, the sum of the entries in the last

column is identical to transferable deposits in Table 2.

Memorandum item:

Branches of foreign banks Branches or agencies of foreign banks. Banks which are

foreign-owned or are subsidiaries of foreign banks are not

included here.

of which EU-based Sub-item to branches of foreign banks, giving the number of

branches for which the head office is located in the EU.

ANNEX Table 6: Payment card functions and accepting terminals (end-of-year figures)

All items include systems operated by banks and non-banks.

A card which has several functions is counted in each relevant line (e.g. a eurocheque card in Europe which can be used to withdraw cash, to make payments and to guarantee cheques is counted in each of the first three main items). Similarly, a number of terminals accept both debit and credit cards. Therefore, in general, these figures should not be added.

A transaction might also include balance enquiries, rather than only those which affect the account balances. It is indicated in a footnote if this is the case, and it cannot be measured separately.

Cards with a cash function
Any card enabling the holder to withdraw cash from a cash

dispenser.

Number of networks A network of ATMs is defined as a group of ATMs managed by

one or more service providers for a bank or group of banks.

ATMs with a cash dispensing

function

Electro-mechanical device allowing the authorised user to withdraw cash from its account and in some cases to access a range of other services, such as balance enquiries, transfers of funds and acceptance of deposits. The ATM may be operated online (with real-time reference to an authorisation database) or

offline.

Number of machines As a rule, each terminal is counted as one machine.

Open access The ATM can be accessed by a holder of a card issued by a

bank other than the bank which owns the ATM, subject to an

agreement between the two banks.

Limited access The ATM can only be accessed by a holder of a card issued by

the bank which owns the ATM.

ATMs with a giro transfer

function

ATMs which allow a cardholder to make credit transfers from its own account to other accounts held at the same institution

or at different institutions.

Card with a debit function A card which enables the holder to have purchases directly

charged to funds on the cardholder's account at a deposittaking institution (may sometimes be combined with another function, such as that of a cash card or cheque guarantee card).

Retailer card A card issued by non-banking institutions for use at specified

retail outlets.

EFTPOS A terminal at a retail location which is designed to capture, and

in some cases also transmit, debit card transactions by

electronic means.

Number of networks An EFTPOS network is defined as a group of EFTPOS terminals

managed by one or more service providers for a bank or group

of banks.

Number of machines As a rule, each EFTPOS terminal is counted as one machine.

Card with a credit function A card indicating that the holder has been granted a line of

credit. It enables the holder to make purchases and/or withdraw cash up to a pre-arranged ceiling. The credit granted may be settled in full by the end of a specific period, or may be settled in part, with the balance taken as extended credit. Interest is charged on the amount of extended credit and the holder is

sometimes charged an annual fee.

Retailer credit card A card issued by non-banking institutions for use at specified

retail outlets. The holder of the card is granted a line of credit.

Card with an e-money function A reloadable multi-purpose prepaid card which can be used at

the sites of several service providers for a wide range of purposes and which has the potential to be used on a national or an international scale, but may sometimes be restricted to a

certain area.

Only the number of valid cards in circulation should be provided, not the number of cards issued, since this figure would not be very informative if empty or invalid cards were

included.

Accepting terminals Refers to the number of terminals (devices) at the point of sale

for receiving e-money. Mobile phones should not be included

in this figure.

Float Amount of money (cash value) which has been loaded onto the

e-money card and has not been used.

Travel and entertainment cards need to be mentioned in the relevant category.

Delayed debit cards should be mentioned separately.

Tables 7 and 8: Volume and value of payment instructions handled by selected

interbank funds transfer systems

With regard to the volume and value of transactions, each payment instruction is counted once (not twice, i.e. the debit from the payer's account and the credit to the payee's account are not counted separately).

IFTS Interbank funds transfer systems in which most (or all) direct

participants are credit institutions and which are used primarily

to process cashless payments.

Funds transfer systems (FTS)

A formal arrangement based on private contract or statute law with multiple membership, common rules and standardised arrangements for the transition and settlement of money obligations arising between the members. As a rule, all IFTSs are mentioned here, both those managed by central banks and those managed by private operators. Figures are provided system by system, with categories of various payment instruments (such as cheques, direct debits, credit transfers, postal drafts, ATMs and POSs, etc.) as sub-items.

Concentration ratio

Market share of the five largest participants in each system.

Tables 9 and 10:

Volume and value of Indicators of use of various cashless payment instruments

These tables present the instruments that customers use for initiating payments to the banking system. Data on the instruments that the banks themselves use are also included, if available. The inclusion/exclusion of the latter data is indicated with a footnote. The objective of these tables is to estimate the volume and the value of cashless payment instruments used in the country concerned. Figures concerning only a sample of banks or customers should not be given, but should be extrapolated to provide figures covering the whole volume and value of cashless payment instruments used in the country.

In principle, the term "payment" is defined here to exclude any funds transfer in which the originator and the beneficiary are the same. This definition excludes any funds transfers in which the originator and the beneficiary are the same institution or individual. Therefore, any instrument which is used by banks' customers to obtain cash should not be counted (e.g. cheques used to obtain cash, or ATM withdrawals - although these operations might be included in Tables 7 and 8, which have a different focus). Likewise, transfers between accounts in the same name at the same institution are excluded (e.g. transfers from a cheque account to a savings account, if both accounts are held at the same bank). However, because in practice it is usually impossible to exclude them from the data, transfers between accounts in the same name, but where the accounts are held at different institutions, are included unless indicated otherwise.

Strictly speaking "cashless" means "without the involvement of cash". Such a narrow definition would exclude money (postal) orders, which involve cash at one or both ends of the transaction, as well as the majority of traveller's cheques, which are often paid in cash. It is not realistic to use such a narrow definition because it is very doubtful whether available statistics would permit a breakdown of the number of money orders or traveller's cheques according to the way they are paid or settled. Therefore, all payment instruments which involve cashless interbank settlement are included in the statistics.

In the case of cross-border payments, there is a need to avoid double counting (i.e. in the country of the originator and in the country of the beneficiary). Cross-border cashless payments are accordingly counted in the country of the originator.

The following guidelines are also followed:

- No distinction is made between interbank items (bank A to bank B), inter-branch items (bank A branch to another bank A branch), or intra-branch items (bank A customer to another bank A customer at the same branch): all are included in the statistics.
- Funds transfers used to settle credit card transactions are included (this is a payment from the user to the issuer).
- Money orders are included under credit transfers.
- Delayed debit cards are included under debit or credit cards, the means of inclusion is explained in a footnote.

The division of each payment instrument into sub-categories is based on the way in which the customer submits the payment instrument to the bank. Accordingly, each payment instrument is distinguished as follows:

face-to-face
 paper-based (e.g. cheques) or electronically submitted

(e.g. debit card at EFTPOS);

via PC or other terminal
 the client submits the payment instrument via the

internet:

telebanking
 via a fixed line network;
 via mobile
 via a wireless network.

Cheques issued Traveller's cheques, eurocheques and bankers' drafts are

included under cheques. Commercial bills are included if funds transfers can be made on the basis of these, without using

another medium.

Payments by debit and credit

cards

Also includes charge cards.

Other card payments Payments made using retailer cards or prepaid cards are shown

here if the data are available. The row label or a footnote

indicates the type of payments included.

Credit transfers A payment order or possibly a sequence of payment orders

made for the purpose of placing funds at the disposal of the

beneficiary.

Direct debits Pre-authorised debit of the payer's account by the payee.

Total The sum of the above items.

Tables 11a and 11b: Instructions handled by trading platforms, clearing houses and securities settlement systems (volume and value of transactions)

Figures are provided separately for each trading platform, clearing house and securities settlement system, with categories of various securities (such as government securities, bonds, shares, certificates of deposits (CDs), futures, options, etc.) as sub-items. Where data are not available for some of the sub-items, this is indicated with "nav".

Central banks can provide figures separately for each trading platform, clearing house and securities settlement system or have the option to provide figures only in respect of securities settlement systems, indicating "nav" for not available or "nap" for not applicable for data relating to trading platforms and clearing houses.

Transfer instructions comprise all transfer instructions entered into the trading platform, clearing house or securities settlement system (including deliveries free of payment). As regards options, all the contracts are included.

As far as CDs are concerned, transactions should be considered regardless of their issuers (banks, central bank or mortgage institutions). Each transaction is counted once (not twice for sale and purchase). It is the transactions themselves that are counted and not the double message notifications.

| Trading biatroffit All infrastructure of mechanism affied at facilitating securi | ding platform | An infrastructure or mechanism aimed at facilitating s | ecurities |
|--|---------------|--|-----------|
|--|---------------|--|-----------|

transactions between those who wish to buy and sell. A trading platform could be a legal entity recognised as an

exchange or an integrated part of a stock exchange.

Clearing house A department of an exchange or a separate legal entity which

provides a range of services related to the clearing and settlement of transactions and payments and to the management of risks associated with the resulting contracts. In many cases, the clearing house acts as the central counterparty.

securities and funds. As a rule all SSSs are mentioned here, not only those managed by the central bank, but also those

managed by private operators.

Table 11c: Number of participants in trading platforms, clearing houses and securities settlement systems

Figures are provided separately for each trading platform, clearing house and securities settlement system, with categories of various participants (such as banks and stockbrokers, etc.) as subitems. Central banks can provide figures separately for each trading platform, clearing house and securities settlement system or have the option to provide figures only in respect of securities settlement systems, indicating "nav" for not available or "nap" for not applicable for data relating to trading platforms and clearing houses.

Table 11d: Outstanding securities ANNEX

Number and value of securities which have been issued; number and value of securities which have been registered. Countries can also provide figures for the "total volume".

Number of stocks listed This covers the number of companies whose shares are traded

on that particular trading platform. If a particular company has more kinds of shares listed on the same platform, these should

only count as one.

Number of other securities

listed

The number of ISIN codes that are traded on that particular trading platform (not counting the shares that have already

been counted in the line above).

Table 11e: Netting ratio in clearing systems

The figure showing the size of the netted transactions in relation to the size of the traded transactions before netting takes place. The ratio refers to the value of the transactions.

Tables 12 and 13: SWIFT tables

These figures are provided by SWIFT.

Sub-members (Table 12) Domestic users sponsored by members abroad.

Participants (Table 12) Participants are not shareholders of SWIFT and their message

traffic over the network is restricted.

Category I (Table 13) Messages used by banks to transfer funds to an account of a

customer (i.e. messages relating to payments that are messages,

category I e.g. MT100 messages).

Category II (Table 13) Messages used by banks to transfer funds to an account of

another bank (i.e. messages relating to payments that are

category II messages, e.g. MT200 messages).

Domestic traffic (Table 13) Messages sent to/received from domestic users.
